substitution in a position (P) where (P) is an amino acid with at least (C 25% of its side group exposed to the surface, with the proviso that the substitution is not fhr24SSer/Ala/His/Lys/Arg/Asn/Asp/Glu/GlyGlyGln, C Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe31Ser/Ala/Thr/C His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VII); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial intarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow cresplantatory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-lation comprised service in the protein conjugates have an increased in vivo half-life, increased servin half-life increased in vivo half-life.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is considered on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as ANU99002 and the information in claim 9 or the conjugate appearing as ANU99002 and the information in claim 9 or the present sequence is not content to the conjugate appearing as ANU99002 and the information in claim 9 or the present sequence is not conjugate the protein C sequence appearing as ANU99002 and the information in claim 9 or the present sequence is not conjugate the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C sequence appearing as ANU99002 and the information in claim 9 or the protein C

            The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available approximation of the conjugate offers a number of advantages over the currently available.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Hys/Arg/Asn/Asp/Glu/Gly/Gln/Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe31Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, 2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous

WPI; 2002-489875/52.

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

cc attachment group for the non-polypeptide group (e.g. an N-glycosylation cc site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least cc substitution in a position to the surface, with the proviso that the cubstitution is not fhr24SSer/Ala/His/Iys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a molectide sequence (V) encoding crising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (3) an expression of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and conjugates, variants and protein conjugates) after venous changes of thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow and the conjugates of the conjugates of the conjugates of the conjugates of the conjugates of the conjugates of the conjugates of the conjugates of manufacture of medicaments for the treatment (and conjugates) conjugates of medicaments for the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of the treatment (and conjugates) conjugates of medicaments of medicaments of medicaments of medicaments of medicaments of medicaments of medicaments of medicaments of medicaments of polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an shock, emboli e.g. pulmonary emboli, transplantation such as bone m transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-l The invention relates to a conjugate (I) comprising at least one non-

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available
                                                                                                                                                                                                         sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy; bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mu
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 419 AA;

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

CC shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow contraining the property of transplantation, burns, pregnancy, major surgery/transma or adult respiratory distress syndrome (ARDS). The variant protein C has an contrained and increased resistance to activation by e.g. human plasma and alphal cantitypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced crenal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available capproducts, including longer duration between injections, cadministration of less protein, and fewer side effects. Noreover, a reduced anticoagallant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The greener for protein C is considered on chromosome 2q11-q14. The present sequence is not content of the invention but was created by the indexer using the more of the configuration but was created by the indexer using the content of the configuration but was created by the indexer using the cc introduced and/or at least one removed amino acid residue comprissing an CC attachment group for the non-polypeptide group (e.g. an N-glycosylation CC sibstitution in a position (i) a variant (IV) of (III) comprising a cubstitution in a position (p) where (p) is an amino acid with at least CC substitution in a position (p) where (p) is an amino acid with at least CC substitution is not Thr24Ser/Ala/His/Mrg/Asn/Asp/Glu/Gly/Gln, (r) a positivation of the surface, with the proviso that the CC substitution is not Thr24Ser/Ala/His/Mrg/Asn/Asp/Glu/Gly/Gln or Phe31Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe31Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC life or the serum half-life of a parent protein C polypeptide. The CC conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic cohock smboli or villonnavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic cohock smboli or milmonavy macholi transplantation choice septic chock smboli or milmonavy macholi transplantation choice septic chock smboli or milmonavy macholi transplantation choice sequence (V) and milmonavy macholi transplantation choice sequence (V) and milmonavy macholi transplantation choice chock sequence (V) and milmonavy macholi transplantation choice chock sequence (V) and milmonavy macholi transplantation choice chock sequence (V) polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one The invention relates to a conjugate (I) comprising at least one nonprotein C sequence appearing as AAU99002 and the information in attached to

CC salte). Also included are (1) a variant (10) of (111) comprising of substitution in a position (2) where (3) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln, (2) are substitution is not Thr245Ser/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln or Ph3315Ser/Ala/Thr/CC His/Lys/Arg/Asm/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (1V); (3) an expression vector (VI) comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC and in the manifacture of medicaments for the treatment (and CC diagnosis/prevention) of stroke, myocardial infarction, after venous (CC thrombosis, disseminated intravascular coagulation (DIC), sepsits, septic (2) shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow (CC transplantation, burns, pregnancy, major surgery/trauma or adult (2) recall clearance, reduced immunogenicity and/or increased resistance to activation by e.g. human plasma and alpha-1 ce increased serum half-life, increased resistant to inhibitors, reduced (2) cantitypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced (2) cantitypsin of less protein, and fewer side effects. Moreover, a conjugate offers a number of advantages over the currently available (2) cadministration of less protein, and fewer side effects. Moreover, a conjugate has an extended plasma life. The gene for protein C is conjugate has an extended plasma life. The gene for protein C is not conjugate and extended plasma life. The gene for protein C is not conjugate and should an extended plasma life. The gene for protein c is not conjugate and the infermation in claim 9 created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 created by the infermation in claim 9 created by the infermation in claim 9 created by the infermation in c

and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
```

Claim 9; Page; 92pp; English.

polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 55% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Sequence 419 AA; The invention relates to a conjugate (I) comprising at least one non-

The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
                                                                                                                                                                                                                                                                                                                                                                                                                             18-OCT-2000; 2000DK-00001560.

Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2013-914. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 419 AA;

Human Protein C zymogen protein mutant L296N/T298S

```
cc introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation cc site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least cc substitution is not inreased to the surface, with the proviso that the cubistitution is not inreased to the surface, with the proviso that the growpset/laf/mr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, (2) a nucleotide sequence (V) encoding (Tyr30)25er/Alaf/mr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phals6Ser/Alaf/mr/CC (Tyr30)25er/Alaf/mr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phals6Ser/Alaf/mr/CC (Tyr); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC (I); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C) comprising (V); (4) a host cell (VII) (C) and in the manufacture of medicament for the functional in vivo half-CC (I); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) (C) and in the manufacture of medicaments for the treatment (and (C) diagnosis/prevention) of stroke, myocardial infarction, after venous (C) chock, emboli e.g. pulmonary emboli, transplantation (DIC), sepsis, septic chock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein ( has an intrapsed in vivo half-life, increased resistant to inhibitors, reduced cincreased serum half-life, increased resistant to inhibitors, reduced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC; sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy; bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                           polypeptide moiety (II) (e.g. an N-glycosyl group) covalently atta
a protein C polypeptide comprising an amino acid sequence which di
from that of a parent protein C polypeptide (III) in at least one
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Andersen KV,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC

```
comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
life or the serum half-life of a parent protein C polypeptide. The
conjugates, variants and protein C proteins are useful as medicaments,
and in the manufacture of medicaments for the treatment (and
diagnosis/prevention) of stroke, myocardial infarction, after venous
thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic
shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow
transplantation, burns, pregnancy, major surgery/trauma or adult
respiratory distress syndrome (ARDS). The variant protein C has an
increased resistance to activation by e.g. human plasma and alpha-1
antitrypsin. The conjugates have an increased in vivo half-life,
increased serum half-life, increased resistant to inhibitors, reduced
                                                               increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available AFC products, including longer duration between injections, are duced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of AFC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
Sequence 419 AA,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached ta protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Claim 9; Page; 92pp; English.

CC polypeptide moiety (II) (e.g. an Neglycosyl group) covalently attached to Co protein C polypeptide comprising an amino acid sequence which differs CC introduced and/or at least one removed amino acid sequence which differs CC site). Also included are (1) a variant (IV) of (III) in at least one cattachment group for the mon-polypeptide group (e.g. an N-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising an constitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC substitution is not Th745Ser/ala/His/Iys/Arg/Ams/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC His/Iys/Arg/Ams/Asp/Glu/Gly/Gln; (2) an uclpotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-CC life or the serum half-life of a parent protein C polypeptide. The CC onjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and Cd diagnosis/prevention) of stroke, myocardial infarction, after venous comprisations (PC) because of serum half-life, increased in variant protein C polypeptide. The conjugates have an increased in vivo half-life, increased resistance to activation by e.g. human plasma and alpha-1 confirmation of less protein, and fewer side effects. Moreover, a caministration of less protein, and fewer side effects. Moreover, a caministration of less protein, and fewer side effects. Moreover, a caministration of less protein, and fewer side effects. Moreover, a calculation of less protein, and fewer side effects. Moreover, a calculation conjugate has an extended plasma life. The gene for protein C is calculated protein C is invention. Note: The gene for protein C is not the specification but was created by the indexer using the conjugate fination but was created by the indexer using the content of the invention.

Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein () conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as ANU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alphanantirpeased resistance to activation by e.g. human plasma and alphanantirpeased resistance to activation by e.g. human plasma and alphanantirpeased resistance to activation by e.g. human plasma and alphanantirpeased resistance to activation by e.g. human plasma and alphanantirpeased serum half-life, increased in vivo half life.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced analysis at least one removed amino acid residue comprising an

and myocardial infarction, Novel conjugate useful to protein a polypeptide for treating or preventing septic shock, stroke ion, comprises non-polypeptide group covalently polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

240

The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least 55% of its side group exposed to the surface, with the proviso that the substitution is not thr/45ser/Ala/Hs/Ivs/Arg/Asn/Asp/Glu/Gly/Gln, Tyy302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or phe316Ser/Ala/Thr/Hi

The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 CC antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced CC increased serum half-life, increased resistant to inhibitors, reduced CC The conjugate offers a number of advantages over the currently available CC APC products, including longer duration between injections, caministration of less protein, and fewer side effects. Moreover, a CC conjugate anticoagulant activity is beneficial to reduce the risk of CC leeding while maintaining the antinflammatory activity of APC (activated protein C) conjugates. This must be especially important when CC conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not conducted protein confidence appearing as AAU99002 and the information in claim 9 cc.

(first entry)

```
The invention relates to a conjugate (I) comprising at least one non-
CC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to
CC a protein C polypeptide comprising an amino acid sequence which differs
CC introduced and/or at least one removed amino acid sequence which differs
CC introduced and/or at least one removed amino acid sequence which differs
CC introduced and/or at least one removed amino acid sequence which differs
CC site). Also included are (I) a variant (IV) of (III) in at least one
CC substitution in a position (P) where (P) is an amino acid with at least
CC sto of its side group exposed to the surface, with the proviso that the
CC substitution is not Thr24SEx/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tiyr302Ser/Ala/Thx/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tiyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/

Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the
                                                                                                                                                                                                                                                                                                                  Synthetic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Human Protein

Ct thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic chrombosis, disseminated intravascular coagulation (DIC), sepsis, septic cs shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow ctransplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an circulated resistance to activation by e.g. human plasma and alpha-1 cantitrypsin. The conjugates have an increased in vivo half-life, antitrypsin. The conjugates have an increased in vivo half-life, creased serum half-life, increased resistant to inhibitors, reduced crenal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available captured products, including longer duration between injections, cadministration of less protein, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antinflammatory activity of APC checking while maintaining the antinflammatory activity of APC the conjugate has an extended plasma life. The gene for protein C is created on chromosome 2gl3-gl4. The present sequence represents a zymogen
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         cc attachment group for the non-polypeptide group (e.g. an N-glycosylation cc site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CT Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe315Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-CC infe or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, CC and in the manufacture of medicaments for the treatment (and diagnosis prevention) of stroke, myocardial infarction, after venous control of the procession in the procession in the control of the procession in the control of the procession control of the control of the control of the procession control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the control of the co
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          18-OCT-2000; 2000DK-00001560.

ct attachment group for the non-polypeptide group (e.g. ann N-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC 15% of its side group exposed to the surface, with the proviso that the CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) excoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) (Comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-CC diagnosis/prevention) of stroke, myocardial infarction, after venous conjugates, variants and protein C proteins are useful as medicaments, CC diagnosis/prevention) of stroke, myocardial infarction, after venous ctransplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an CC increased resistance to activation by e.g. human plasma and alpha-1 conjugate offers a number of advantages over the currently available CC The conjugate offers a number of advantages over the currently available CC C moducts. including longer duration between injections.
                                                                                                                                                                                                                                                                                                                                         APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an
                                                                                                                                                                       located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the
Sequence 419 AA;
                                                                                                             protein C sequence appearing as AAU99002 and the information in claim 9

The invention relates to a conjugate (I) comprising at least one non-cc polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs cf from that of a parent protein C polypeptide (III) in at least one controlled that of a parent protein C polypeptide (III) in at least one controlled and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation csite). Also included are (I) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least csite). Also included are to the surface, with the provise that the substitution is not Thr24Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln (Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) (C) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           18-OCT-2000; 2000DK-00001560.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2913-914. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

23-AUG-2002 (first entry)

Human Protein C zymogen protein mutant T253N/D255T.

**EEEEEEEEE** Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC; sepsis; septic shock; embolism; pulmonary embolism; burn; pregnancy;

```
The conjugate offers a number of APC products, including longer of administration of less protein,
                                      diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available ARC products, including longer duration between injections, administration of learnership and femeration between injections.
                                                                                                                                                                                                                                                                                                                                                                        25% of its side group exposed to the surface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-life or the serum half-life of a parent protein C polyaperide. The conjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and are useful) of the transfer of medicaments for the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment of the treatment 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Misc-difference
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 bone marrow transplantation; major surgery; trauma; ARDS; coagulant; adult respiratory distress syndrome; alpha-1 antitrypsin; mutant; mutein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       attachment group for the non-polypeptide group (e.g. an N-glycosylation site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    18-OCT-2000; 2000DK-00001560.

This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Sequence 419 AA;

attachment group for the non-polypeptide group (e.g. an M.-glycosylation CC site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC substitution is not Thr24SSer/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe3i6Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe3i6Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-CC infe or the serum half-life of a parent protein C polypeptide. The CC comjugates, variants and protein C proteins are useful as medicaments, and in the manufacture of medicaments for the treatment (and CC diagnosis/prevention) of stroke, myocardial infarction, after venous CC thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic Shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow crespiratory distress syndrome (ARDS). The variant protein C has an CC increased resistance to activation by e.g. human plasma and alpha-1 concreased sestime to activation by e.g. human plasma and alpha-1 concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to inhibitors, reduced concreased serum half-life, increased resistant to combine to concreased concreased resistant to manufacture.

                                                                                                                                                                           increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to creduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Misc-difference 385
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached a protein C polypeptide comprising an amino acid sequence which differs from that of a parent protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid residue comprising an

crespiratory distress syndrome (ARDS). The variant protein C has an
increased resistance to activation by e.g. human plasma and alpha-1
created increased resistance to activation by e.g. human plasma and alpha-1
created serum half-life, increased resistant to inhibitors, reduced
crenal clearance, reduced immunogenicity and/or increased bioavailability.
Created the conjugate offers a number of advantages over the currently available
created products, including longer duration between injections,
cadministration of less protein, and fewer side effects. Moreover, a
creduced anticoagulant activity is beneficial to reduce the risk of
creduced anticoagulant activity is beneficial to reduce the risk of
cleading while maintaining the antiinflammatory activity of APC
cleated protein C) conjugates. This must be especially important when
the conjugate has an extended plasma life. The gene for protein C is
considered in chromosome 3013-014 plasma life. The gene for protein C is

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 419
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Claim 9; Page; 92pp;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Heavy_chain
```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Andersen KV,

Pedersen AH, Freskgaard PO,

WPI; 2002-489875/52.

Claim 9; Page; 92pp; English

The invention relates to a conjugate (I) comprising at least one non-compressing and protein C polypeptide molety (II) (e.g. an N-glycosy) group) covalently attached to CC a protein C polypeptide comprising an amino acid sequence which differs CC from that of a parent protein C polypeptide (III) in at least one attachment group for the non-polypeptide group (e.g. an N-glycosylation cathering and compressing an attachment group for the non-polypeptide group (e.g. an N-glycosylation CC site), Also included are (1) a variant (IV) of (III) comprising a compatition of the side group exposed to the surface, with the proviso that the compressing and CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a mucleotide sequence (V) encoding CC (IV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) CC comprising (V) or (VI); (5) increasing (W2) the functional in vivo half-CC life or the serum half-life of a parent protein C polypeptide. The conjugates, variants and protein C proteins are useful as medicaments,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Matches 417;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Query Match
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced immunogenicity and/or increased bloavailability.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow

                                                                                                                                                                                                                                                                                                                                                                                                                                  .157
                              Freskgaard PO;
```

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English

CC polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to Colypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to C a protein C polypeptide (III) in at least one introduced and/or at least one removed amino acid sequence which differs CC introduced and/or at least one removed amino acid residue comprising an CC site). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least CC 25% of its side group exposed to the surface, with the proviso that the CC 25% of its side group exposed to the surface, with the proviso that the CC 17%1025ex/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a mucleotide sequence (V) encoding (CIV); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (V2) the functional in vivo half-CC infe or the serum half-life of a parent protein C polypeptide. The CC comprising (V) or (VI); (5) increasing (V2) the functional in vivo half-CC and in the manufacture of medicaments for the treatment (and C diagnosis/prevention) of stroke, myocardial infarction, after venous CC transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increasing resistance to activation by a minam with amain and alpha-1 increased resistance to activation by a minam and alpha-1 administration of less protein, and fewer side effects. Moreover, reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced renal clearance, reduced imminogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available appropriately. Including longer duration between injections. The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attache

This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymoger protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9

cc polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to ca protein C polypeptide comprising an amino acid sequence which differs cfrom that of a parent protein C polypeptide (III) in at least one can that of a parent protein C polypeptide (III) in at least one can troduced and/or at least one removed amino acid residue comprising an catachment group for the non-polypeptide group (e.g. an N-glycosylation cities). Also included are (1) a variant (IV) of (III) comprising a substitution in a position (P) where (P) is an amino acid with at least comparent comprision and comprision of the sufface, with the proviso that the substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln, cry302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/A
                                              renal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available APC products, including longer duration between injections, administration of less protein, and fewer side effects. Moreover, a reduced anticoagulant activity is beneficial to reduce the risk of bleeding while maintaining the antiinflammatory activity of APC (activated protein C) conjugates. This must be especially important when the conjugate has an extended plasma life. The gene for protein C is located on chromosome 2q13-q14. The present sequence represents a zymogen protein C variant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                  thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, prespancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 antitrypsin. The conjugates have an increased in vivo half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors, reduced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       18-OCT-2000; 2000DK-00001560.

WPI; 2002-489875/52

Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.

Claim 9; Page; 92pp; English.

The invention relates to a conjugate (I) comprising at least one nonCC polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to
CC a protein C polypeptide comprising an amino acid sequence which differs
CC from that of a parent protein C polypeptide (III) in at least one
CC introduced and/or at least one removed amino acid residue comprising an
CC attachment group for the non-polypeptide group (e.g. an N-glycosylation
CC site). Also included are (I) a variant (IV) of (III) comprising a
CC substitution in a position (P) where (P) is an amino acid with at least
CC 5% of its side group exposed to the surface, with the proviso that the
CC substitution is not Thr245Ser/Ala/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln,
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/G cc increased serum half-life, increased resistant to inhibitors, reduced crenal clearance, reduced immunogenicity and/or increased bioavailability. The conjugate offers a number of advantages over the currently available captures including longer duration between injections, captures, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of certification of less protein, and fewer side effects. Moreover, a creduced anticoagulant activity is beneficial to reduce the risk of certification protein conjugates. This must be especially important when certificated protein C) conjugates. This must be especially important when certificated on chromosome 2g13-g14. The present sequence represents a zymogen conjugate has an extended plasma life. The gene for protein C is cated on chromosome 2g13-g14. The present sequence is not constant of the invention. Note: The present sequence is not shown in the specification but was created by the indexer using the corporation C sequence appearing as AAU99002 and the information in claim 9 shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-l antitrypsin. The conjugates have an increased in vivo half-life, increased serum half-life, increased resistant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors. Sequence 419 AA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           shock, emboli e.g. pulmonary emboli, transplantation such as bone marrow of transplantation, burns, pregnancy, major surgery/trauma or adult respiratory distress syndrome (ARDS). The variant protein C has an increased resistance to activation by e.g. human plasma and alpha-1 concincreased serum half-life, increased are stant to inhibitors, reduced increased serum half-life, increased resistant to inhibitors, reduced concincreased serum half-life, increased resistant to inhibitors, reduced concincreased serum half-life, increased versitant to inhibitors, reduced concincreased serum half-life, increased versitant to inhibitors, reduced concincreased protein of less protein, and fewer side effects. Moreover, a standard products, including longer duration between injections, committation of less protein, and fewer side effects. Moreover, a concincreased protein of less protein, and fewer side effects. Moreover, a conjugate maintaining the antiinflammatory activity of APC (activated protein C onjugates, This must be especially important when the conjugate has an extended plasma life. The gene for protein C is coated on chromosome 2q13-q14. The present sequence is not shown in the specification but was created by the indexer using the protein C sequence appearing as AAU99002 and the information in claim 9 or the conjugate appearing as AAU99002 and the information in claim 9 or the conjugate protein of the specification but was created by the information in claim 9 or the conjugate protein of the specification but was created by the information in claim 9 or the conjugate protein conjugate has an extended plasma life.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        from that of a parent protein C polypeptide (III) in at least one cintroduced and/or at least one removed amino acid residue comprising an attachment group for the non-polypeptide group (e.g. an N-glycosylation comprising a position of the non-polypeptide group (e.g. an N-glycosylation comprising a substitution in a position (P) where (P) is an amino acid with at least comprisition of the group exposed to the surface, with the proviso that the substitution is not Thr485ser/Ala/Hai/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC Tyr302Ser/Ala/Thr/His/Lys/Arg/Asn/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/CC His/Lys/Arg/Asn/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding comprising (V); (3) an expression vector (VI) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V); (4) a host cell (VII) comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-comprising (V) and in the manufacture of medicaments for the treatment (and diagnosis/prevention) of stroke, myocardial infarction, after venous thrombosis, disseminated intravascular coagulation (DIC), sepsis, septic show

```

The invention relates to a conjugate (I) comprising at least one non-polypeptide moiety (II) (e.g. an N-glycosyl group) covalently attached to a protein C polypeptide comprising an amino acid sequence which differs

Claim 9; Page; 92pp; English

AAU99077 AAU99077 standard; protein; 419 AA

```
The invention relates to a conjugate (I) comprising at least one non-
CC polypeptide molety (II) (e.g. an N-glycosyl group) covalently attached to
CR a protein C polypeptide comprising an amino acid sequence which differs
CR from that of a parent protein C polypeptide (III) in at least one
CR introduced and/or at least one removed amino acid residue comprising an
CR site). Also included are (I) a variant (IV) of (III) comprising a
CR substitution in a position (P) where (P) is an amino acid with at least
CR substitution is not Thr24SSer/Ala/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CR TY302Ser/Ala/Thr/His/Lys/Arg/Asm/Asp/Glu/Gly/Gln or Phe316Ser/Ala/Thr/
CR His/Lys/Arg/Asm/Asp/Glu/Gly/Gln; (2) a nucleotide sequence (V) encoding
CR His/Lys/Arg/Asm/Asp/Glu/Gly/Gln; (3) an expression vector (VI) comprising (V); (4) a host cell (VII)
CR comprising (V) or (VI); (5) increasing (M2) the functional in vivo half-
CR iffe or the serum half-life of a parent protein C polypeptide. The
CR conjugates, variants and protein C proteins are useful as medicaments,
CR diagnosis/prevention) of stroke, myocardial infarction, after venous
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; Protein C; N-glycosylation; APC; activated protein C; zymogen; serum half-life; chromosome 2q13-q14; stroke; myocardial infarction; after venous thrombosis; disseminated intravascular coagulation; DIC;
                                                                                                                                                                                                                                                                                                                                                                    Novel conjugate useful for treating or preventing septic shock, stroke and myocardial infarction, comprises non-polypeptide group covalently attached to protein C polypeptide comprising an attachment group.
